

EDUCATION

Year	Degree/Exam	Institute	CGPA/Marks
2027	BS-MS(5YR)	IIT Kharagpur	8.10 / 10
2023	Class XII	Narayana Junior College,Visakhapatnam	97.1%
2021	Class X,SSC	Narayana School,Parvathipuram	100%

INTERNSHIPS

Restaurant Management Platform | Waitplay [May'26 - Jul'26]

(Engineered a full-stack platform to streamline restaurant operations, enhance order management, and improve sales visibility)

- Configured responsive and modular interfaces using **Next.js** to enable seamless user interactions and efficient navigation.
- Built a scalable **POS** system with **Node.js** services and integrated role-based authentication for secure multi-level access.
- Deployed customer ordering workflows with **dynamic QR codes** and **Socket.io** for synchronized, low-latency live updates.
- Implemented a database layer using **Prisma ORM**, ensuring type-safe queries, schema reliability, and scalable data handling.

PROJECTS

QueryGenie Natural Language to SQL Python | SQLite | Streamlit | LLM [Jan'26-Feb'26]

- Developed an AI-powered **Natural Language to SQL** system that converts **user queries into SQL statements using LLMs**. Implemented a SQL validation layer restricting execution to safe read-only queries, preventing destructive database operations.
 - Built an interactive **Streamlit** application integrated with **SQLite** for real-time query execution and results visualization.
- Designed a modular architecture separating LLM integration, database initialization, and validation layers to optimize system performance, improve debugging efficiency, and ensure clean codebase maintainability.

Object-Oriented Library Management System C++|OOP | Design Patterns [May'26 - Jun'26]

- Developed a modular **Library Management System** in C++ using **Factory, Singleton, Observer, and Strategy** design patterns to maximize system flexibility, minimize architectural coupling, and significantly improve long-term code reusability.
- Implemented complete core workflows for **book/member management**, automated borrowing/returning cycles, and a configurable fine engine, deploying clean **SOLID principles** to ensure seamless maintainability and extensibility.

DocuSync AI | Autonomous Documentation pipeline [Nov'25-Dec'25]

- Built an autonomous **multi-agent documentation platform** using **Python, FastAPI, Airia AI Pipelines, GitHub Webhooks**, and **Confluence REST APIs** to analyze merged PRs and synchronize technical documentation in real time.
- Designed a **two-stage PR classification engine** combining **Regex-based routing, LLM semantic classification**, and live **Confluence context retrieval** across **13 workflow cases** to optimize inference latency and reduce token overhead.
- Engineered asynchronous event-driven pipelines using **FastAPI BackgroundTasks, SSE, asyncio.Queue, contextvars**, and **SQLite idempotency** tracking to guarantee exactly-once processing under concurrent GitHub webhook retries.
- Developed **surgical Confluence mutation workflows** using **Storage XML parsing, CQL search**, and **dynamic section-level injection pipelines** for migration guides, deprecation handling, and **automated documentation synchronization**.
- Implemented **Human-in-the-Loop** approval pipelines with **Slack Block Kit, interactive webhook actions, confidence-based routing**, and **staged memory workflows** to safely manage high-risk production documentation updates.
- Skills : Agentic Workflows, HITL, Python, FastAPI,LLMs, GitHub Webhooks, Confluence APIs, Async Programming, SQLite

SKILLS AND EXPERTISE

Languages: C++ | Python | JavaScript | SQL (SQLite) | HTML | CSS | MATLAB

Web &Backend Frameworks: Next.js | Node.js | FastAPI | Flask | Streamlit | Socket.io | Prisma ORM

Libraries, Tools &AI: C++ STL | NumPy | Scikit-learn | Airia AI Pipelines | GitHub Webhooks | Git

Developer Tools &APIs: VS Code | GitHub | Jupyter | Confluence REST API | Slack Block Kit | Linux

COURSEWORK INFORMATION

Numerical Methods Laboratory using MATLAB
File Organization and Database Systems*
Computer Organization and Architecture*
Stochastic Processes and Applications
Design and Analysis of Algorithms*
Programming and Data Structures*
Modern Algebra

Measure Theory and Integration
Combinatorics and Graph Theory
Applied Computational Methods
Probability and Statistics
Optimization Techniques*
Linear Algebra
(*marked courses have lab component as well)

Transform Calculus
Big Data Analysis
Theory of Computations
Real Analysis
Mathematical Modelling*
Topology

EXTRA CURRICULAR ACTIVITIES

National Sports Organization (NSO): I was part of the NSO Athletics unit.

- Volunteer, Swachhata Hi Seva Campaign (2023)
- Volunteer, Shaurya Sports Meet (2023)
- Illumination Team Member, Sarojini Naidu / Indira Gandhi Hall of Residence
